### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

#### **Listing of Claims:**

Claim 1 (Currently Amended): An emergency medical device comprising:  
at least one sensor to measure one or more patient parameters;  
a first display monitor to display at least a first subset of the patient parameters to an operator; and  
a second display monitor to display at least a second subset of the patient parameters to the operator, wherein the first and the second display monitors face in different directions.

Claim 2 (Original): The emergency medical device of claim 1, in which a major surface of the first display monitor is arranged in a first plane and a major surface of the second display monitor is arranged in a second plane, and the first plane and the second plane are substantially perpendicular to one another.

Claim 3 (Original): The emergency medical device of claim 1, in which a major surface of the first display monitor is arranged in a first plane and a major surface of the second display monitor is arranged in a second plane, and the first plane and the second plane are substantially parallel to one another.

Claim 4 (Original): The emergency medical device of claim 1, further comprising a housing and a cover attached to the housing, the first display monitor and the second display monitor being located within the cover, in which the first display monitor is located on one side of the cover and the second display monitor is located on the opposite side of the cover.

Application Number 10/712,597  
Amendment dated March 9, 2005

Claim 5 (Original): The emergency medical device of claim 4, in which the first display monitor displays the first subset of patient parameters when the cover is closed.

Claim 6 (Original): The emergency medical device of claim 5, in which the first display monitor is turned off when the cover is opened.

Claim 7 (Original): The emergency medical device of claim 4, in which the second display monitor displays the second subset of patient parameters when the cover is open.

Claim 8 (Original): The emergency medical device of claim 7, in which the second display monitor is turned off when the cover is closed.

Claim 9 (Original): The emergency medical device of claim 4, in which the first display monitor displays the first subset of patient parameters and the second display monitor displays the second subset of patient parameters when the cover is open.

Claim 10 (Original): The emergency medical device of claim 1, further comprising a handle, and in which the first display monitor is located on a side of the device on which the handle is located and the second display monitor is located on a side of the device adjacent to the handle.

Claim 11 (Original): The emergency medical device of claim 1, in which the first display monitor displays the first subset of patient parameters and the second display monitor displays the second subset patient parameters concurrently.

Claim 12 (Original): The emergency medical device of claim 1, in which the first subset of patient parameters and the second subset of patient parameters include at least some of the same patient parameters.

Application Number 10/712,597  
Amendment dated March 9, 2005  
Responsive to Office Action mailed December 9, 2004

Claim 13 (Original): The emergency medical device of claim 1, in which the first subset of patient parameters and the second subset of patient parameters include at least one different patient parameter.

Claim 14 (Original): The emergency medical device of claim 1, in which at least one of the first display monitor and the second display monitor displays emergency medical device status information in addition to the subset of patient parameters.

Claim 15 (Original): The emergency medical device of claim 1, further comprising a port that electrically couples to the first display monitor.

Claim 16 (Original): The emergency medical device of claim 15, in which the port comprises one of a wired port and a wireless port, and the first display monitor is detached from the emergency medical device.

Claim 17 (Original): The emergency medical device of claim 16, in which the first display monitor comprises a display that is a component of one of a laptop computer, a handheld computer, a personal digital assistant, a cellular telephone, and a wristwatch.

Claim 18 (Original): The emergency medical device of claim 1, further comprising a memory to store the measured patient parameters, in which the emergency medical device displays the stored patient parameters via at least one of the first display monitor and second display monitor.

Claim 19 (Original): The emergency medical device of claim 1, in which the first display monitor and the second display monitor comprise one of a Liquid Crystal Display (LCD) monitor, Light-Emitting Diode (LED) display monitor, and a plasma display monitor.

Claim 20 (Original): The emergency medical device of claim 1, in which the device comprises an external defibrillator.

Application Number 10/712,597  
Amendment dated March 9, 2005  
Responsive to Office Action mailed December 9, 2004

Claim 21 (Original): The emergency medical device of claim 1, in which the device comprises one of an external therapeutic emergency medical device and an external diagnostic emergency medical device.

Claim 22 (Currently Amended): A method comprising:  
measuring one or more patient parameters;  
displaying a first subset of the measured patient parameters to an operator via a first display monitor of an emergency medical device; and  
displaying a second subset of the measured patient parameters to the operator via a second display monitor of the emergency medical device, wherein the first and the second display monitors face in different directions.

Claim 23 (Original): The method of claim 22, in which a major surface of the first display monitor is arranged in a first plane and a major surface of the second display monitor is arranged in a second plane, and the first plane and the second plane are substantially perpendicular to one another.

Claim 24 (Original): The method of claim 22, in which a major surface of the first display monitor is arranged in a first plane and a major surface of the second display monitor is arranged in a second plane, and the first plane and the second plane are substantially parallel to one another.

Claim 25 (Original): The method of claim 22, in which the first display monitor and the second display monitor are located within a cover that is attached to a housing of the emergency medical device, the first display monitor being located on one side of the cover and the second display monitor located on the opposite side of the cover.

Application Number 10/712,597  
Amendment dated March 9, 2005

Claim 26 (Original): The method of claim 25, in which displaying the first subset of the measured patient parameters to the operator via the first display monitor of the emergency medical device comprises displaying the first subset of the measured patient parameters to the operator via the first display monitor of the emergency medical device when the cover is closed.

Claim 27 (Original): The method of claim 26, further comprising powering off the first display monitor upon detecting opening of the cover.

Claim 28 (Original): The method of claim 25, in which displaying the second subset of the measured patient parameters to the operator via the second display monitor of the emergency medical device comprises displaying the second subset of the measured patient parameters to the operator via the second display monitor of the emergency medical device upon detecting opening of the cover.

Claim 29 (Original): The method of claim 28, further comprising powering off the second display monitor upon detecting closure of the cover.

Claim 30 (Original): The method of claim 22, in which the first display monitor is located on a side on which a handle is located and the second display monitor is located on a side adjacent to the handle.

Claim 31 (Original): The method of claim 22, in which the first subset of patient parameters and the second subset of patient parameters include at least some of the same patient parameters.

Claim 32 (Original): The method of claim 22, in which the first subset of patient parameters and the second subset of patient parameters include at least one different patient parameter.

Claim 33 (Original): The method of claim 22, further comprising receiving input from the operator identifying at least one of the subsets of patient parameters to display.

Application Number 10/712,597  
Amendment dated March 9, 2005  
Responsive to Office Action mailed December 9, 2004

Claim 34 (Original): The method of claim 22, further comprising displaying emergency medical device status information to the operator via at least one of the first display monitor and the second display monitor.

Claim 35 (Original): The method of claim 22, further comprising:  
storing measured patient parameters; and  
displaying the stored patient parameters to the operator via at least one of the first display monitor and the second display monitor.

Claim 36 (Original): The method of claim 22, in which the emergency medical device comprises an external defibrillator.

Claim 37 (Original): The method of claim 22, in which the emergency medical device comprises one of an external therapeutic emergency medical device and an external diagnostic emergency medical device.

Claim 38 (Original): The method of claim 22, in which the first display monitor comprises a display that is a component of one of a laptop computer, a handheld computer, a personal digital assistant, a cellular telephone, and a wristwatch.
